C# Format Specifier Example

1. Why is the output: Equation: 10 + 20 = $30.00?

- `X + Y` equals 30.

- `:C` formats it as currency ($30.00).

- Full output becomes: Equation: 10 + 20 = $30.00

2. What is the benefit?

- Improves readability.

- Ideal for money and percentages.

- Saves manual formatting time.

3. Another Example (:P for Percent)

Code:

```
double score = 0.875;
Console.WriteLine($"Your score is: {score:P}");
```

Output:
